Why an I.V.?

Why not just drink water and take oral supplements? I.V. is one of the fastest and most effective ways to nourish your body back to health.

Science tells us the intravenous route is the fastest way to deliver essential fluids, antioxidants, electrolytes, medications, and important vitamins to the human body, to restore optimum hydration, support the immune system, and remedy a variety of conditions.

The I.V. fluid is 100% effectively absorbed directly into the bloodstream. The body also converts the nutrients more beneficially than oral intake. Oral intake is only absorbed from 50% to 60% at best. A loss of benefiting reactions occur when consuming certain nutrients orally.

Dawn Weber
Owner/Master Injector
